PROJECT INFORAMTION

Aim: To collect the information about the reasons for obesity, its implications and suggesting the remedial measures.

Objectives:

- Collecting the information about the obese persons i.e. their age, weight, food habits.
- With the help of a questioner collecting the information about the reasons for obesity, and implications.
- Analyzing the implications and health hazards of obesity
- Concluding about the good food habits.

Tools: Table and questioners

Procedure: Intake of food that is lacking one or more nutrients leads to malnutrition. Obesity is also a type of malnutritious disease. We have undertaken this project to find out the reasons and implications of obesity. As the first step we have collected some information about the children with overweight and tabulated as follows.

SN	NAME	AGE	WEIGHT	FOOD HABITS
1	Saritha	12	40	Chips, cakes, samosa, chats, chocolates
2	Sandhya	13	45	Chocolates, ice creams, cakes, chats.
3	Kaveri	11	42	Fried rice, noodles, gobi, roti
4	Ravi	14	58	Cooldrinks, icecreams, gobi, noodles
5	Soori	13	60	Pizza, burgar, fried food items

We have approached our local health assistant with aquestioner to collect the information about the reasons for obesity.

Questioner:

1. What is obesity?

- An increase in body weight because of excess of body fat is known as obesity.

2. What are the reasons for obesity?

- Over eating of food with low nutrients and high fat content, less or no exercise, laziness, intake of alcohol, intake of high fried items, oil food, etc.

3. What are the implications of obesity?

- Obese persons face many health hazards. Science they take food with out or with less nutrients, they do not gain much energy and loose the immunity power. Due to the

diseases, diabetes, varicose veins, etc.

4. How can we prevent the obesity?

- One has to switch on to good food habits, daily exercise, avoid junk food

We have also collected some information about obesity from the newspapers and aggregated as follows.

Obesity means having too much body fat which leads to overweight. There is a scale of age and weight to be possessed. One should possess the weight reliable to his or her age. If it exceeds beyond the chart it is named as obesity.

Reasons for obesity:

- Food habits with less nutrients
- Lack of exercise and laziness
- Eating of fatty foods, alcoholic drinks
- Changing society

Implications of obesity: Overweight, arthritis, heart disease, renal diseases, lung diseases, varicose veins, cancer, mental depression, etc are the diseases caused due to obesity.

Analysis: The children about whome we have collected the information are suffering with obesity. Because as per the age and weight chart they should possess the weight around 25 to 40 kgs but all of them have excess weight. In future they are going to face many health problems.

Conclusion: Prevention is better than cure. So these children with obesity must be educated about the implications. So we guided them with the following preventive measures.

Preventive measures:

- Eating of balance diet with all the nutrients and fibers.
- Regular exercise twice a day leads to consumption of fats.
- Regular watch on weight.
- Keeping themselves busy with physical work.
- Regular walking and yoga, etc.

With these activities one can be free from obesity and be active throughout the day.
