PROJECT INFORMATION

Aim: To collect the information about the reasons of blood pressure and preventive measures.

Objectives:

- Collecting information about age, weight and BP.
- With the help of a questioner collecting information about BP, reasons and its implications.
- Analyzing the information collected.
- Concluding the preventive measures.

Tools: Table and questioner.

Procedure: Nowadays BP is a common disease which is possessed by many of our family members, neighbors, etc. But it leads to many implications which end the human life. So we decided to undertake this project to find out the reasons and implications. As the first step we collected the BP of our teachers/neighbors and tabulated as below.

SN	NAME	AGE	WEIGHT	BP
1	K. Ramalakshmamma	57	65	130/80
2	N.Sukanya	41	68	120/80
3	K. N. Indiramma	54	60	130/80
4	S. R. Kalpana	52	75	120/ 80
5	G. Gayathri	40	72	140/90
6	K. Manjula	39	45	110/80
7	M.Manjula	55	68	120/80
8	K. S. Sridevi	52	48	130/80
9	M.Radhamma	46	75	120/80
10	Sudharani	35	68	120/80
11	Y. N. Aruna	34	52	110/80
12	D. B. Thaherabegam	41	74	120/80
13	P.Vijaya Devi	56	70	205/90
14	P. Indira Devi	56	75	170/90

We have also collected some information from a doctor with the help of questioner.

1. What is blood pressure?

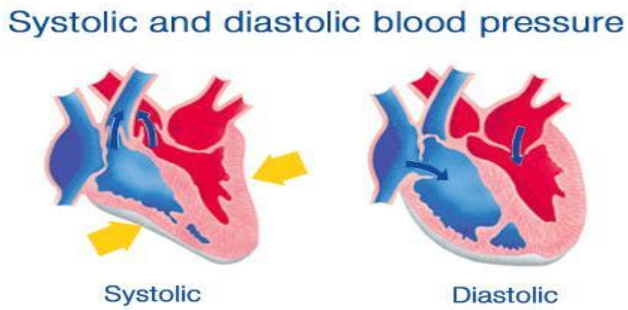

- It is the pressure created by circulation of the blood upon the walls of blood vessels.

2. What is the normal BP for a person?

- It is 120/80.

3. What do the two digits (120 & 80) indicate?

- 120 is the systolic pressure. It is the pressure when the left ventricle of the heart contracts. 80 is the diastolic pressure. It is the pressure when the heart is resting i.e. when the blood is flowing from veins to heart.

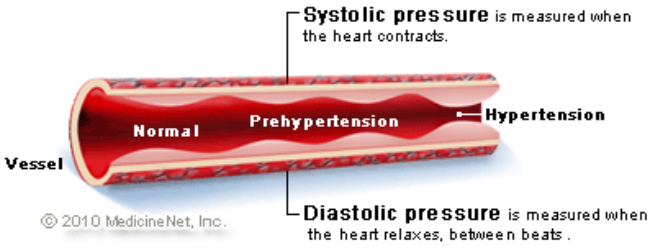

4. What are the types of Blood pressure?

- There are 4 categories of blood pressure.
  1. Hypotension (low BP) which ranges from 90/60
  2. Normal which ranges from 20/80
  3. Stage I Hypertension which ranges from 180/100
  4. Stage II Hypertension which ranges from 250/150

5. How it is measured?

- It is measure with the help of Sphygmomanometer.

6. What are the symptoms of high BP?

- Headache, dizziness, Epistasis(nose bleeding), Nausea, blurred or double vision, etc.

7. What are the reasons for hypertension or high BP?

- Age, Mental stress, high salt intake, smoking, obesity, diabetes, alcohol intake, physical inactivity, family history, intake of high fat content, etc.

Analysis: Blood Pressure is an unseen disease which leads to many implications. It has become a major problem with many people. When we observed the table of BP records, it is clearly seen that the age factor affects the high BP in many people. And it is also observed that the mental stress also leads to high BP. When we interviewed the doctor it is learnt that the high BP leads to many implications such as headache, nausea, diabetes, etc. It is also said that the mental stress and food habits also contribute towards BP.

Conclusion: It is majorly concluded that one has to take a lot of different exercises to keep the BP in normal. The major measures are to take healthy diet by avoiding intake salt and fat content majorly, daily exercises, regular health checkups, leading a peaceful life, etc.

Resources: Teacher and doctor.

Thanks: We thank our guide teacher and also the doctor for proper guidance and reliable information respectively.
